

Iranians Built Suicide Fleet

MoDoracle is reporting that Iran has built a fleet of suicide boats (http://www.modoracle.com/news/Iran-Built-Suicide-Fleet_21977.html).

“More than 9,000 speedboats have been made with deadly explosives engineered into their hulls. The vessels - to patrol the Persian Gulf where UK forces operate - will be piloted by extremist "martyrs". They can be rammed into the side of "enemy" ships and each carries enough explosives to rip a seven-metre hole in a boat's keel. Around 30,000 kamikaze captains are being trained to steer the ships, a source claimed.”

Please read the entire article for more information.

Analysis. The Persian Gulf just became an Iranian lake. Swarm tactic do work both by overloading the automated defensive systems used by most ships and by inflicting the “death of a thousand cuts” recently popularized by Anwar al-Awlaki. One 20 foot wide hole in a modern aircraft carrier won't sink it. A dozen 20 foot holes will, and probably quickly.
